

Corporate Fact Sheet

- What We Do** Orenco Systems is a company based in Oregon, USA, that engineers and manufactures innovative infrastructure solutions, including leading-edge products for the decentralized collection, treatment, and monitoring of wastewater. Orenco's technologies are based on sound scientific principles of chemistry, biology, mechanical structure, and hydraulics. Our products help ensure the health and safety of people, neighborhoods, and communities everywhere by protecting the world's water.
- People** Our workforce of approximately 400 employees includes dozens of engineers and scientists, as well as wastewater treatment system operators. Our research appears in a variety of publications, and our engineers are regularly asked to give workshops and trainings. Our staff participates in about 70 trade shows each year, and the number of registrations for Orenco training sessions and webinars runs about 4,200 per year.
- Products and Services** The company has three product divisions: Orenco Water™, Orenco Composites™, and Orenco Controls™. Products include Prelos® Sewers (liquid-only sewer systems, also known as effluent sewers); secondary treatment systems (including AdvanTex® textile filters in a range of sizes for residential, commercial, municipal, and mobile applications); watertight tanks, basins, scrubbers, and wet wells; pumping and filtration systems; standard and custom electronic control equipment; and fiberglass buildings and various other fiberglass products. We provide technical sales support for all our customers, ongoing support for system operators, and design guidance for large systems.
- Life-to-date sales of flagship products:
 - ~ 270,000 filtering pump vaults
 - ~ 3500 Prelos Processors
 - ~ 53,000 AdvanTex units of all sizes
 - ~ 83,000 MVP digital-programmable control panels
 - ~ 43,000 VeriComm® remote telemetry control panels for residential applications
 - ~ 4000 TCOM™ remote telemetry control panels for commercial/municipal applications
 - Orenco liquid-only sewer systems in municipalities and communities around the world: 689
 - Countries where Orenco equipment is installed: > 70
 - Patents: 12 (1 pending, 2 current, 9 expired)
- Markets** Individual homes and businesses use Orenco's fiberglass tanks, pumping systems, secondary wastewater treatment systems, and electrical controls. Growing communities that need to install, replace, or expand wastewater collection and treatment networks use Prelos Sewers and AdvanTex Treatment Systems. Oil, gas, and mining operations use Orenco's mobile wastewater plants. In addition to electronic controls and telemetry for wastewater systems, Orenco also manufactures custom and OEM electronic controls and industrial fiberglass products for a variety of industries.
- Facilities** The company has 340,000 total sq ft (31,587 sq m) of facilities under roof in the following locations:
- Sutherlin, Oregon: 150,000 sq ft (13,935 sq m) of facilities on a 26-acre (10.5-ha) site
 - Wilbur, Oregon: 190,000 sq ft (17,652 sq m) of facilities on a 4.5-acre (1.8-ha) site

Distribution

Orenco sells its wastewater products through about 330 points of distribution in North and Central America, Australasia, Europe, and Africa. Custom controls are sold through many of these same distribution points, as well as through direct OEM relationships.

History

Orenco Systems was established in Oregon, USA, in 1981. The company pioneered the local use of liquid-only (effluent) sewers and sand filters for decentralized wastewater collection and treatment. In 2000, Orenco introduced its flagship treatment product, the AdvanTex textile filter, followed in 2001 by the VeriComm telemetry monitoring system, a SCADA system priced for the residential onsite wastewater market. In 2014, Orenco began to apply its expertise in composites to the manufacturing of large-scale industrial products. The Prelos Processor, the core of a Prelos Sewer, was introduced in 2019. In 2024, the company was acquired by Infiltrator Water Technologies, a wholly owned subsidiary of Advanced Drainage Systems, Inc.
